

# High Performance Diamond Rescue Blades!

**BROCO®**

## From Broco, the forced entry torch leader- **Broco Diamond Rescue Blades!**

Race through steel, concrete, wood, poly-carbonate (Plexiglas). One incredible blade does it all.

Solid core construction so no broken edges (12" & 14")

Double layer diamond brazed cutting edge

- Aggressive cutting on most materials
- Extremely long blade life
- Smooth performance reduces fatigue

Light weight

- Less gyroscopic effect
- More control

Diamond electroplated facing

- Protects the core
- Reduces heat
- Prevents binding
- Increases blade life

The Diamond Rescue blade's double layer diamond cutting edge is thin like a metal cutting blade to yield cut times in steel that are near to those of fragile, quick-wearing abrasive disks. Yet the more aggressive texture allows it to shred other media too including concrete and laminated glass that have been typically cut with heavy carbide tipped blades. And the nickel alloy matrix securing the diamonds resists erosion far longer. 9", 12" and 14" Diamond Rescue blades are solid core; from cutting edge to cutting edge it is all one piece. These blades can't break or chip like the diamond blades with laser welded cutting edges.

With all these industry leading features Broco's Diamond Rescue blade is still one of the most affordable on the market making it the best value for your money.

- Smooth cuts on metal, concrete and more.
- Cut concrete and rebar in the same pass.
- Long blade life and fast cutting speed.
- Premium performance at a budget price.
- Four sizes: 9", 12", 14" & 16"

The Mini Rescue diamond blade is available in 4.5" & 7" diameters.

With the same type cutting edge as the Diamond Rescue, the Mini Rescue can be used with electric cutoff tools to cut through chains, locks and door bolts.

*Tested on plate armor, ceramics and high strength metal-fiber-enriched reinforced concrete, the Broco Diamond Rescue™ blade succeeded beyond expectations.*
